Email Assistent

1
Incoming/Outgoing emails

Project communications scattered across threads

2
Copilot Studio Agent

GPT-5 with Generative Orchestration

3
Excel Table

Single source of thruth in SharePoint

4
Living Tasks

Always-updated log and quick summaries

Goal is to turn email chaos inte organized, actionable task management

High-level Architecture

1. Email Trigger

"When an email arrives" (Outlook)
sends only Messaged ID to agent

2. Copilot Studio Agent

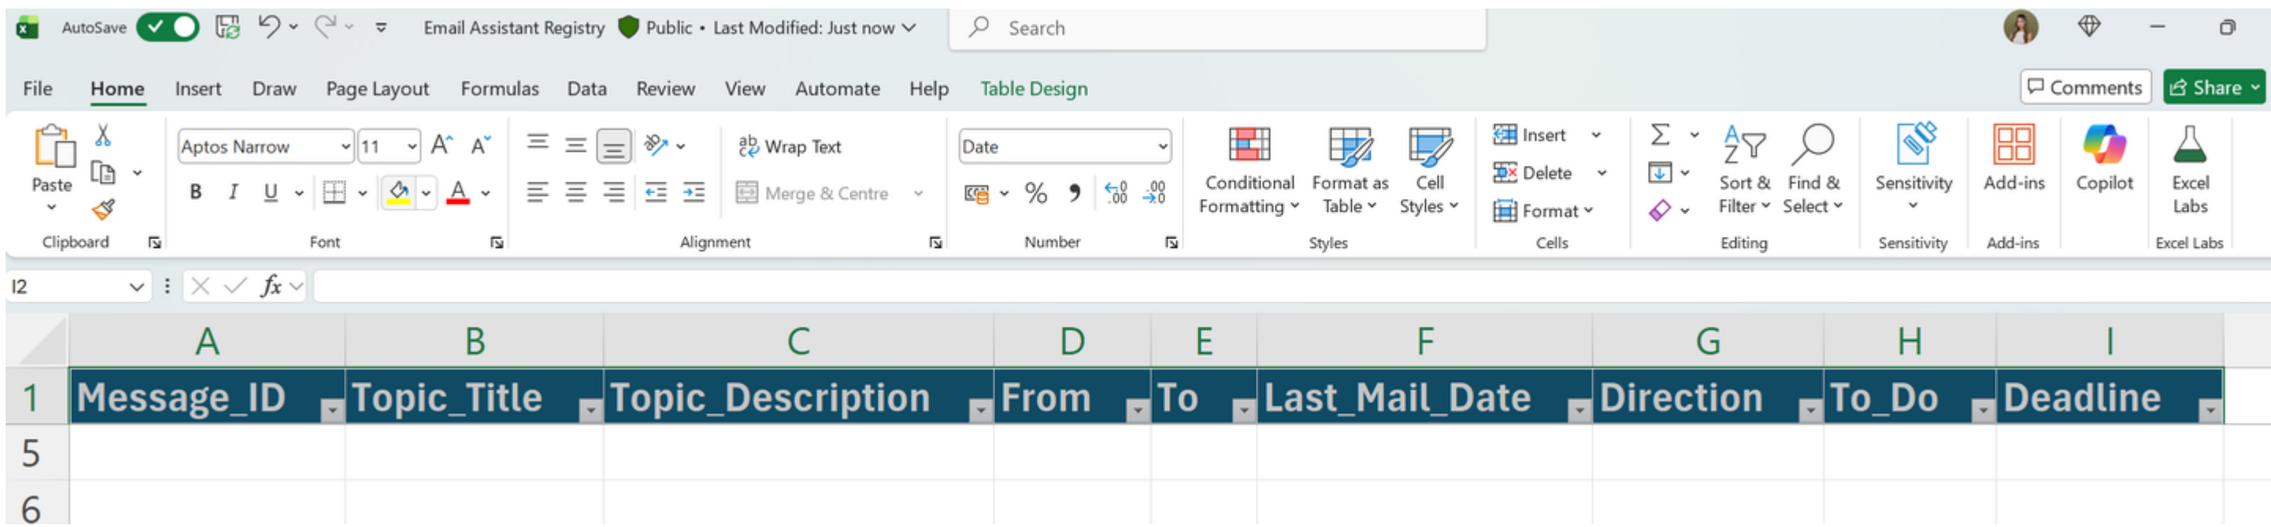
GPT-5 + Generative Orchestration ON
Processes email intelligently

3. Excel Actions

Get Email, Add row, List rows, Update row
All target same SharePoint table

Note: Mesage ID-only trigger prevents data duplication and ensures clean processing

The Excel Table Schema



Mail Direction Logic:

- IN: Sender ≠ sallyluong@...onmicrosoft.com
- OUT: Sender = sallyluong@...onmicrosoft.com

Acts as a living log of all tasks across all projects

Topic: "Email Management" Flow

Store Message ID
From trigger into a variable

Get email details
From, to, cc, subject, body, datetime

List Excel Rows
Current table snapshot

Topic: "Email Management" Flow

Store Message ID
From trigger into a variable

Get email details
From, to, cc, subject, body, datetime

List Excel Rows
Current table snapshot

Build Input Strings
email_input + excel_input variables

List Excel Rows
"task amangement logic"

Prompt Action: Matching Logic

New vs Reply Decision

Subject content differs? ---> NEW topic

History Check

Match by topic title/description ---> Set HISTORY_ID

Inputs

1. Email input string
2. Excel input (JSON)

JSON Output

```
{
  "DO": "update | create",
  "HISTORY_ID": "matched email id or empty",
  "MESSAGE_ID": "current email message id",
  "TOPIC_TITLE": "generated or preserved",
  "TOPIC_DESC": "generated or continued",
  "FROM": "sender address",
  "TO": "all recipients including CC",
  "LAST_MAIL_DATE": "thread datetime",
  "MAIL_DIRECTION": "IN | OUT",
  "TO_DO": "next action in few words",
  "DEADLINE": "deadline if any”
}
```
