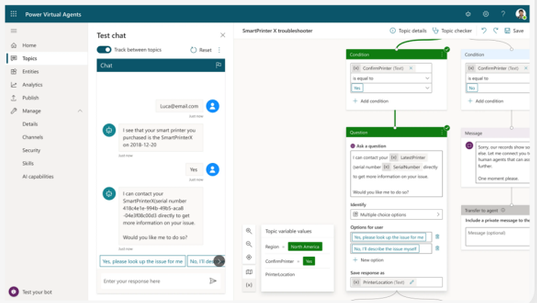
Power Virtual Agents becomes part of Copilot Studio

2019

Power Virtual Agents

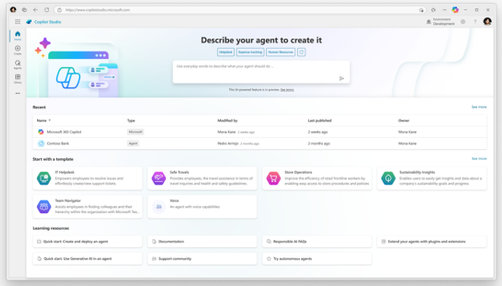
Power Virtual Agents is a low code tool for **creating powerful chatbots**



2023

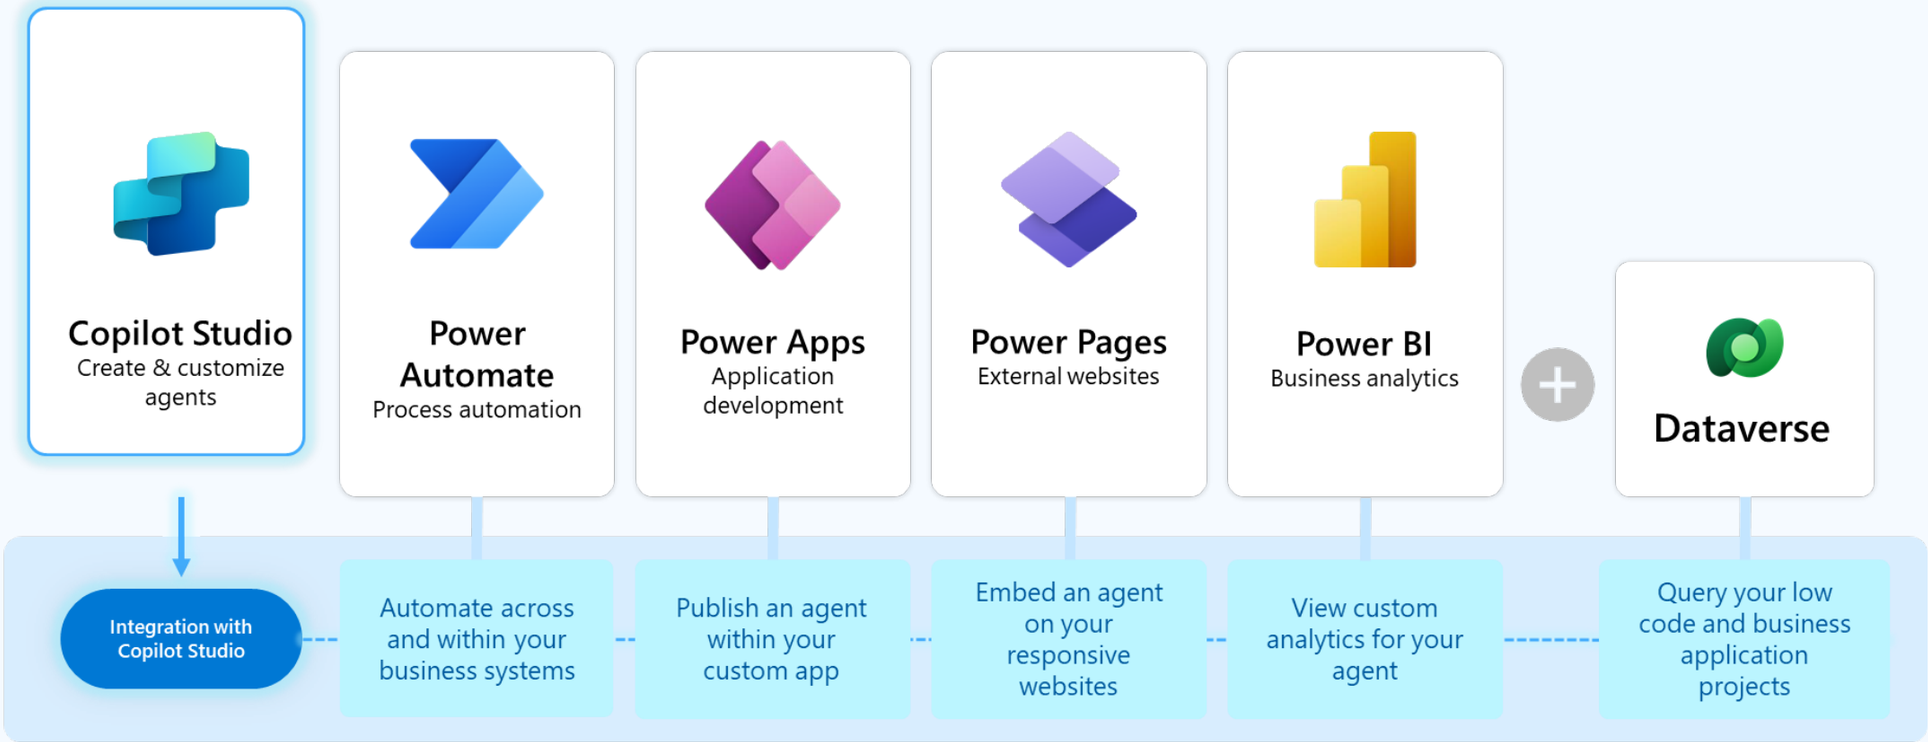
Copilot Studio

Copilot Studio is a low code tool for **building agents** and **extending Microsoft 365 Copilot.**

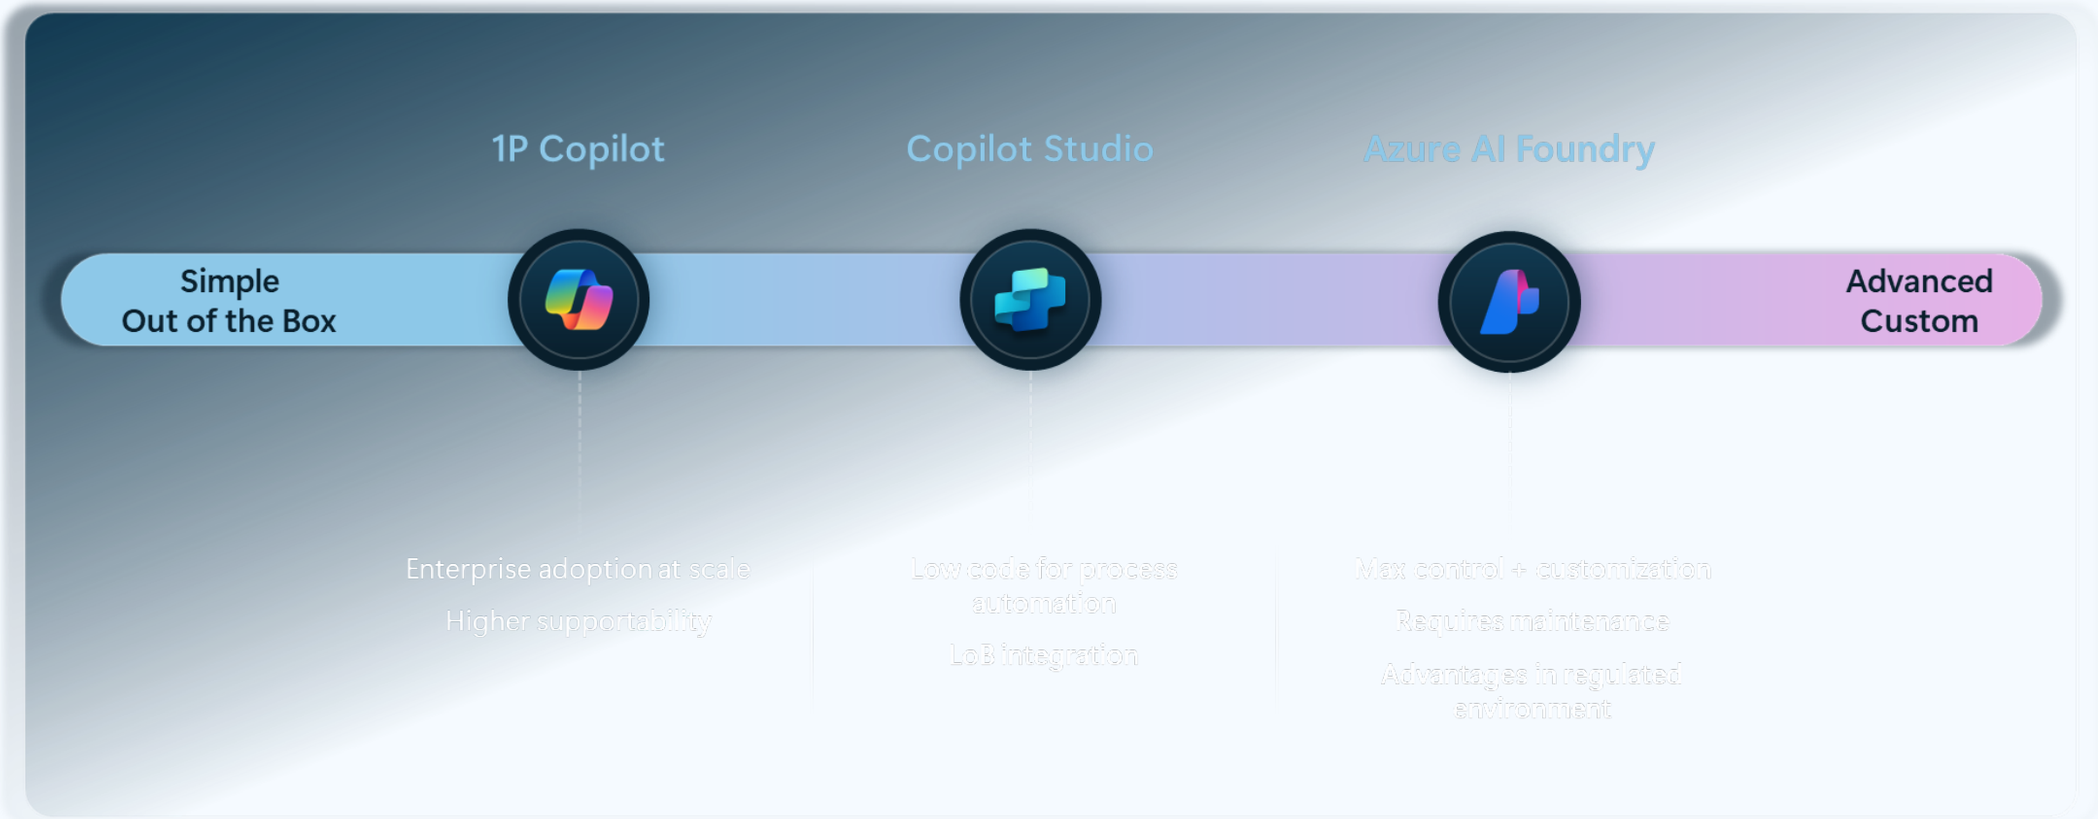


Power Platform

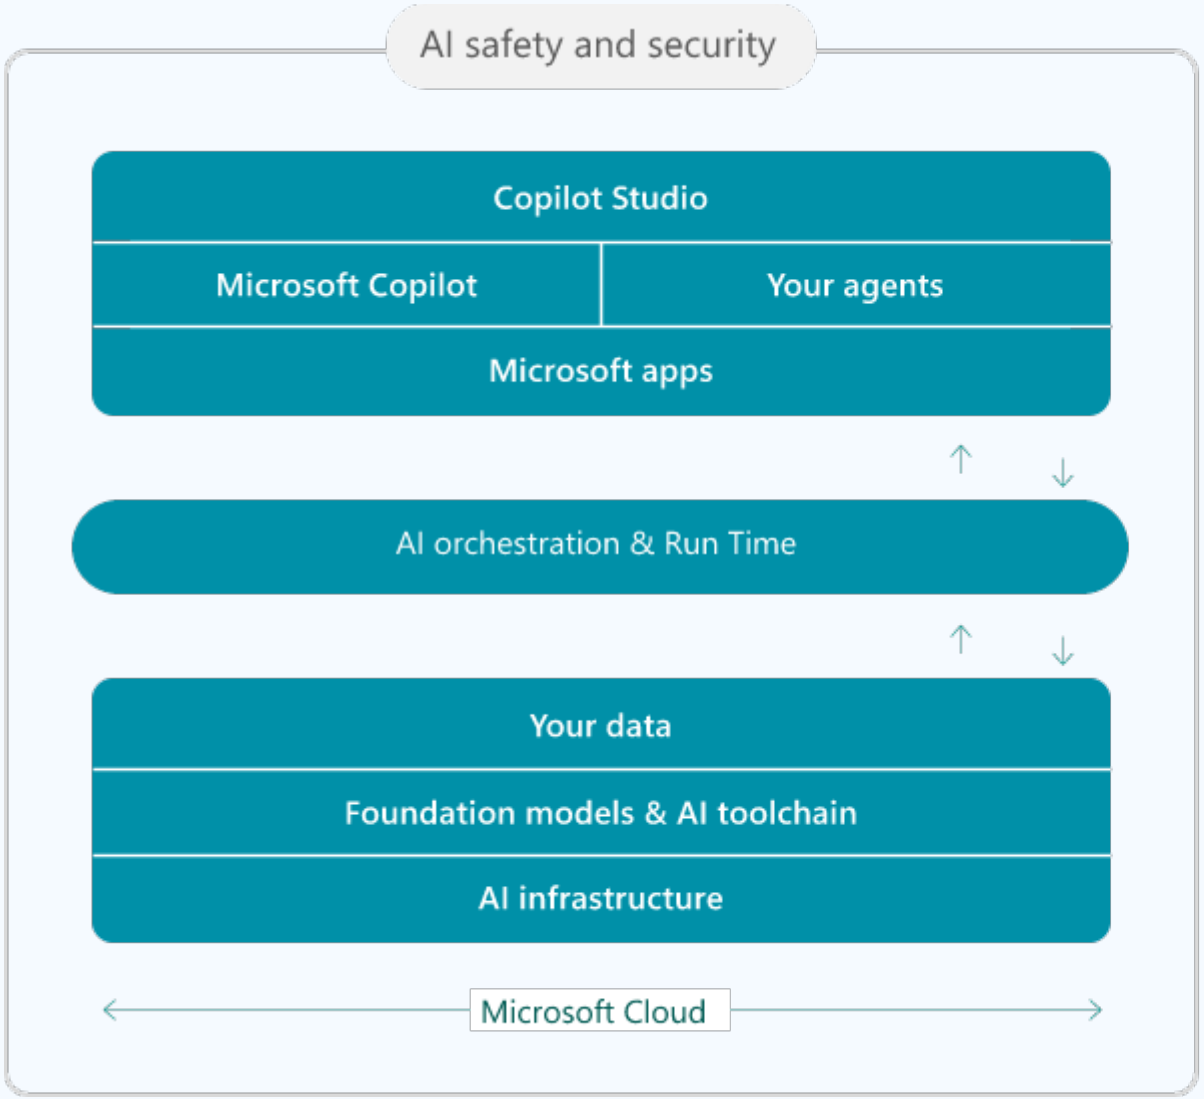
- Accelereate app development
- Automate workflows
- Visualize data
- Reduce repetitive tasks



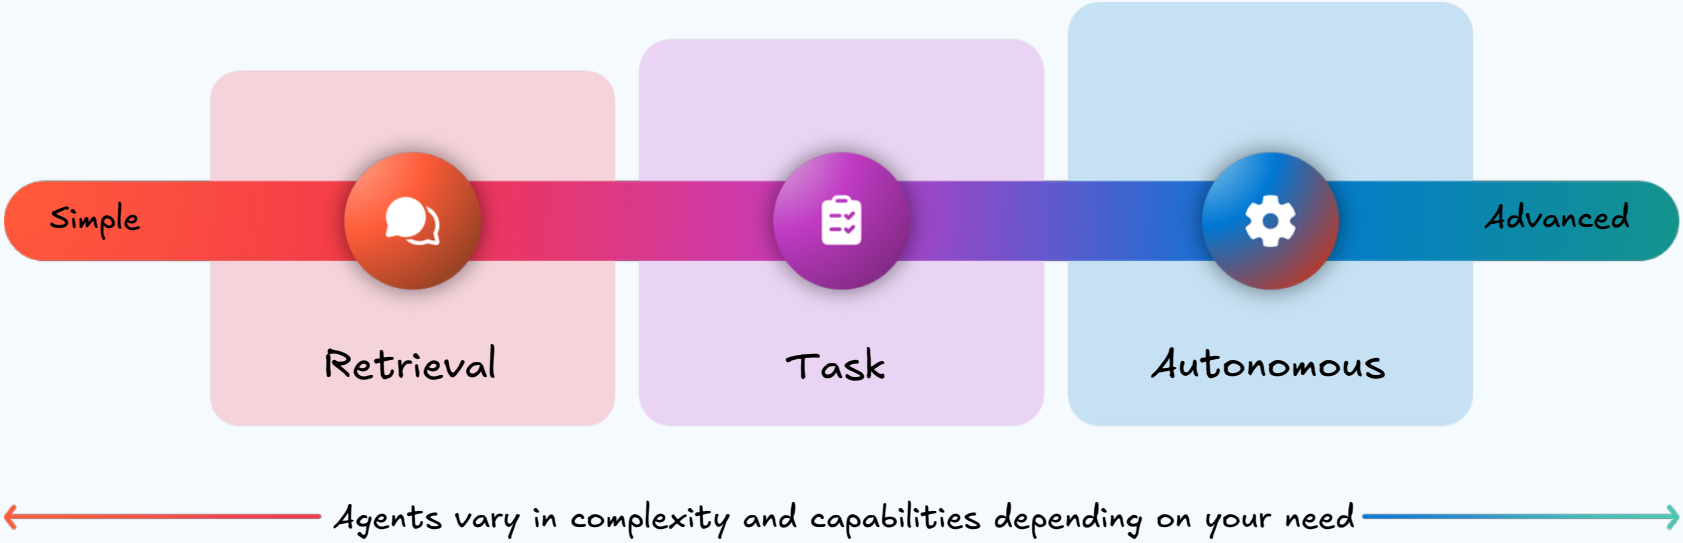
Driving AI Transformation for all roles



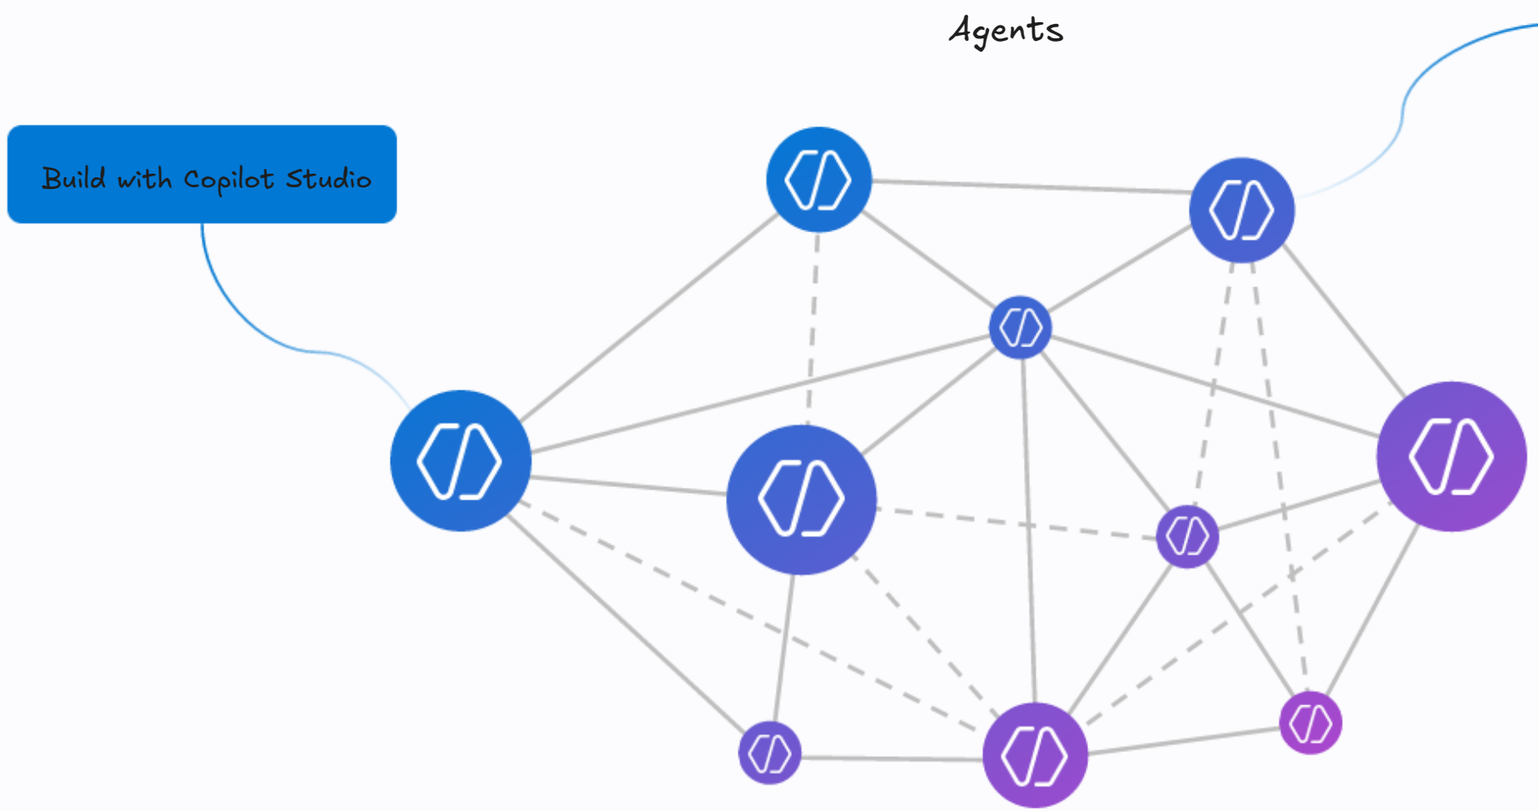
Copilot Stack



From chatbots to autonomous agents



Connect agents to each other, regardless of where they're built



Connect agents from AI Services like:

- Microsoft Azure
- Azure AI Foundry
- Semantic Kernel
- Amazon Web Services
- Google Cloud Platform
- IBM Cloud
- OpenAI
- LangChain (Langflow)
- Agentforce
- MetaGPT
- Relevance AI
- Zapier Central
- Vertex AI
- Perplexity
- Claude
- Gemini

Balancing governance and innovation

Agent Creator/Maker

- How can I **build a conversational agent** that will answer on my behalf?
- How can I build agents that can **drive efficiency and save efforts and costs** for our enterprise?

CISO

- How can I understand all my **data security risks**?
- How can I **discover** all agents and **protect my data** from external threats?
- How can I ensure agents have the right access to data and **prevent data exfiltration**?
- How can I **stay compliant with regulations**?

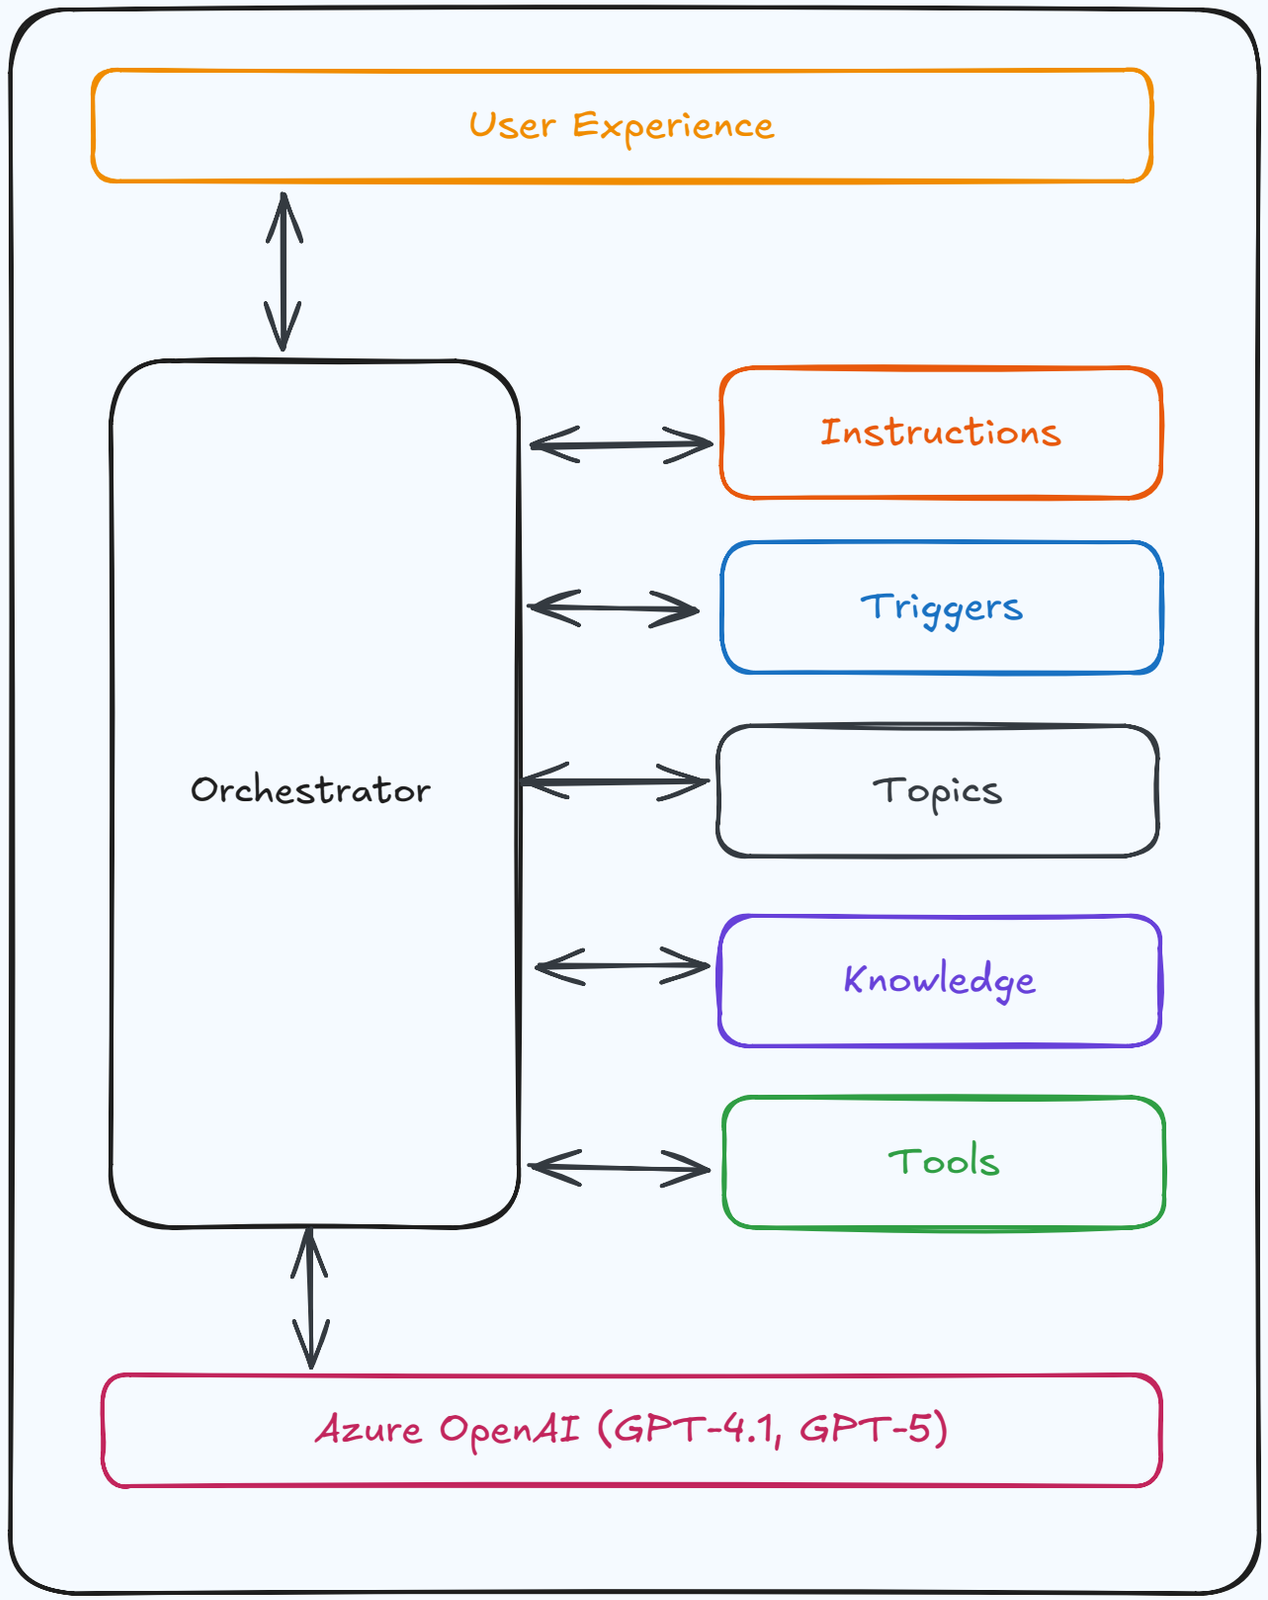
CIO

- How can I ensure that solutions people are building **follow guidelines?**
- How can I gain **visibility** to what is getting used?
- How can I get **experts to review agents** before they get shared broadly?
- How can I drive **cost efficiency and ROI?**

Anatomy of an Agent

1

Copilot Studio Components



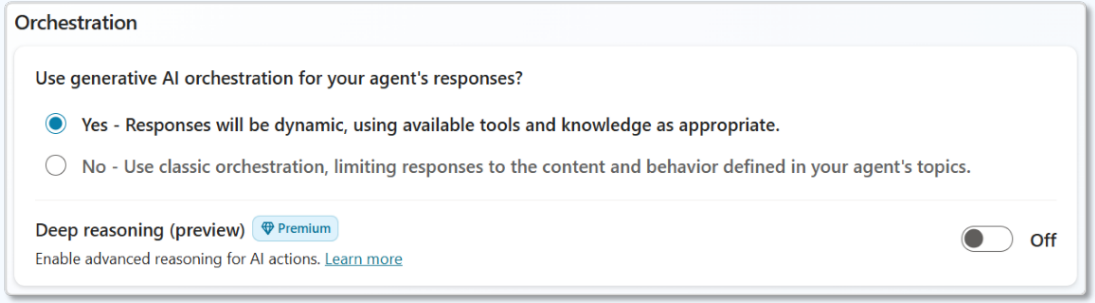
Orchestration

Classic orchestration

Relies on older model that recognizes intent of the message and redirects conversation to the correct topic.

Generative AI orchestration

Based on modern language model as an orchestrator.



Generative AI Orchestration

Let your agent use AI to choose the best tools, knowledge, topics, and other agents to respond to queries or triggers

Handle variable, multi-step and conversational scenarios by dynamically adapting to user input and context

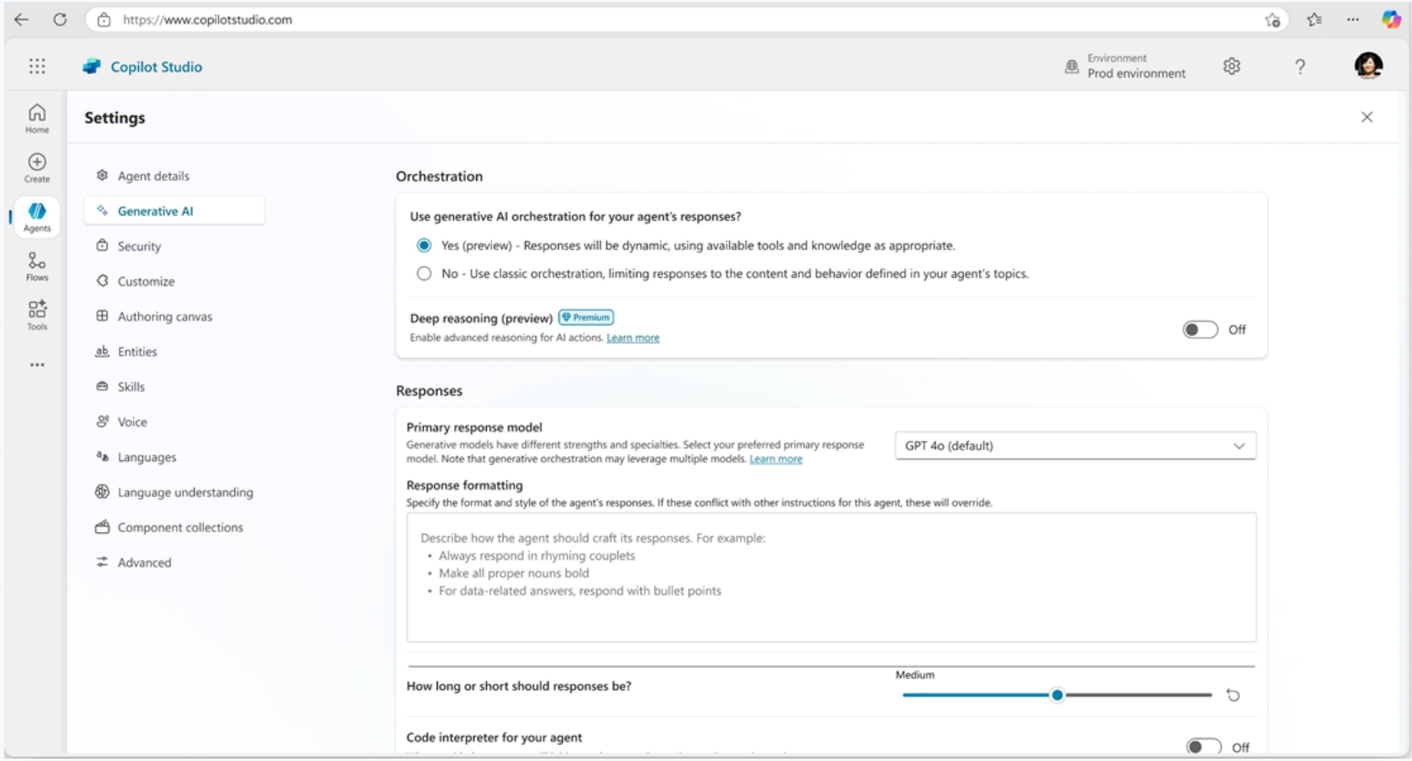
By default, newly created agents are configured to use generative orchestration

How it works

1. Detects user intent in real time
2. Selects and sequences the right tools, plugins, and knowledge sources
3. Executes actions and delivers personalized responses—no need to predefine every path

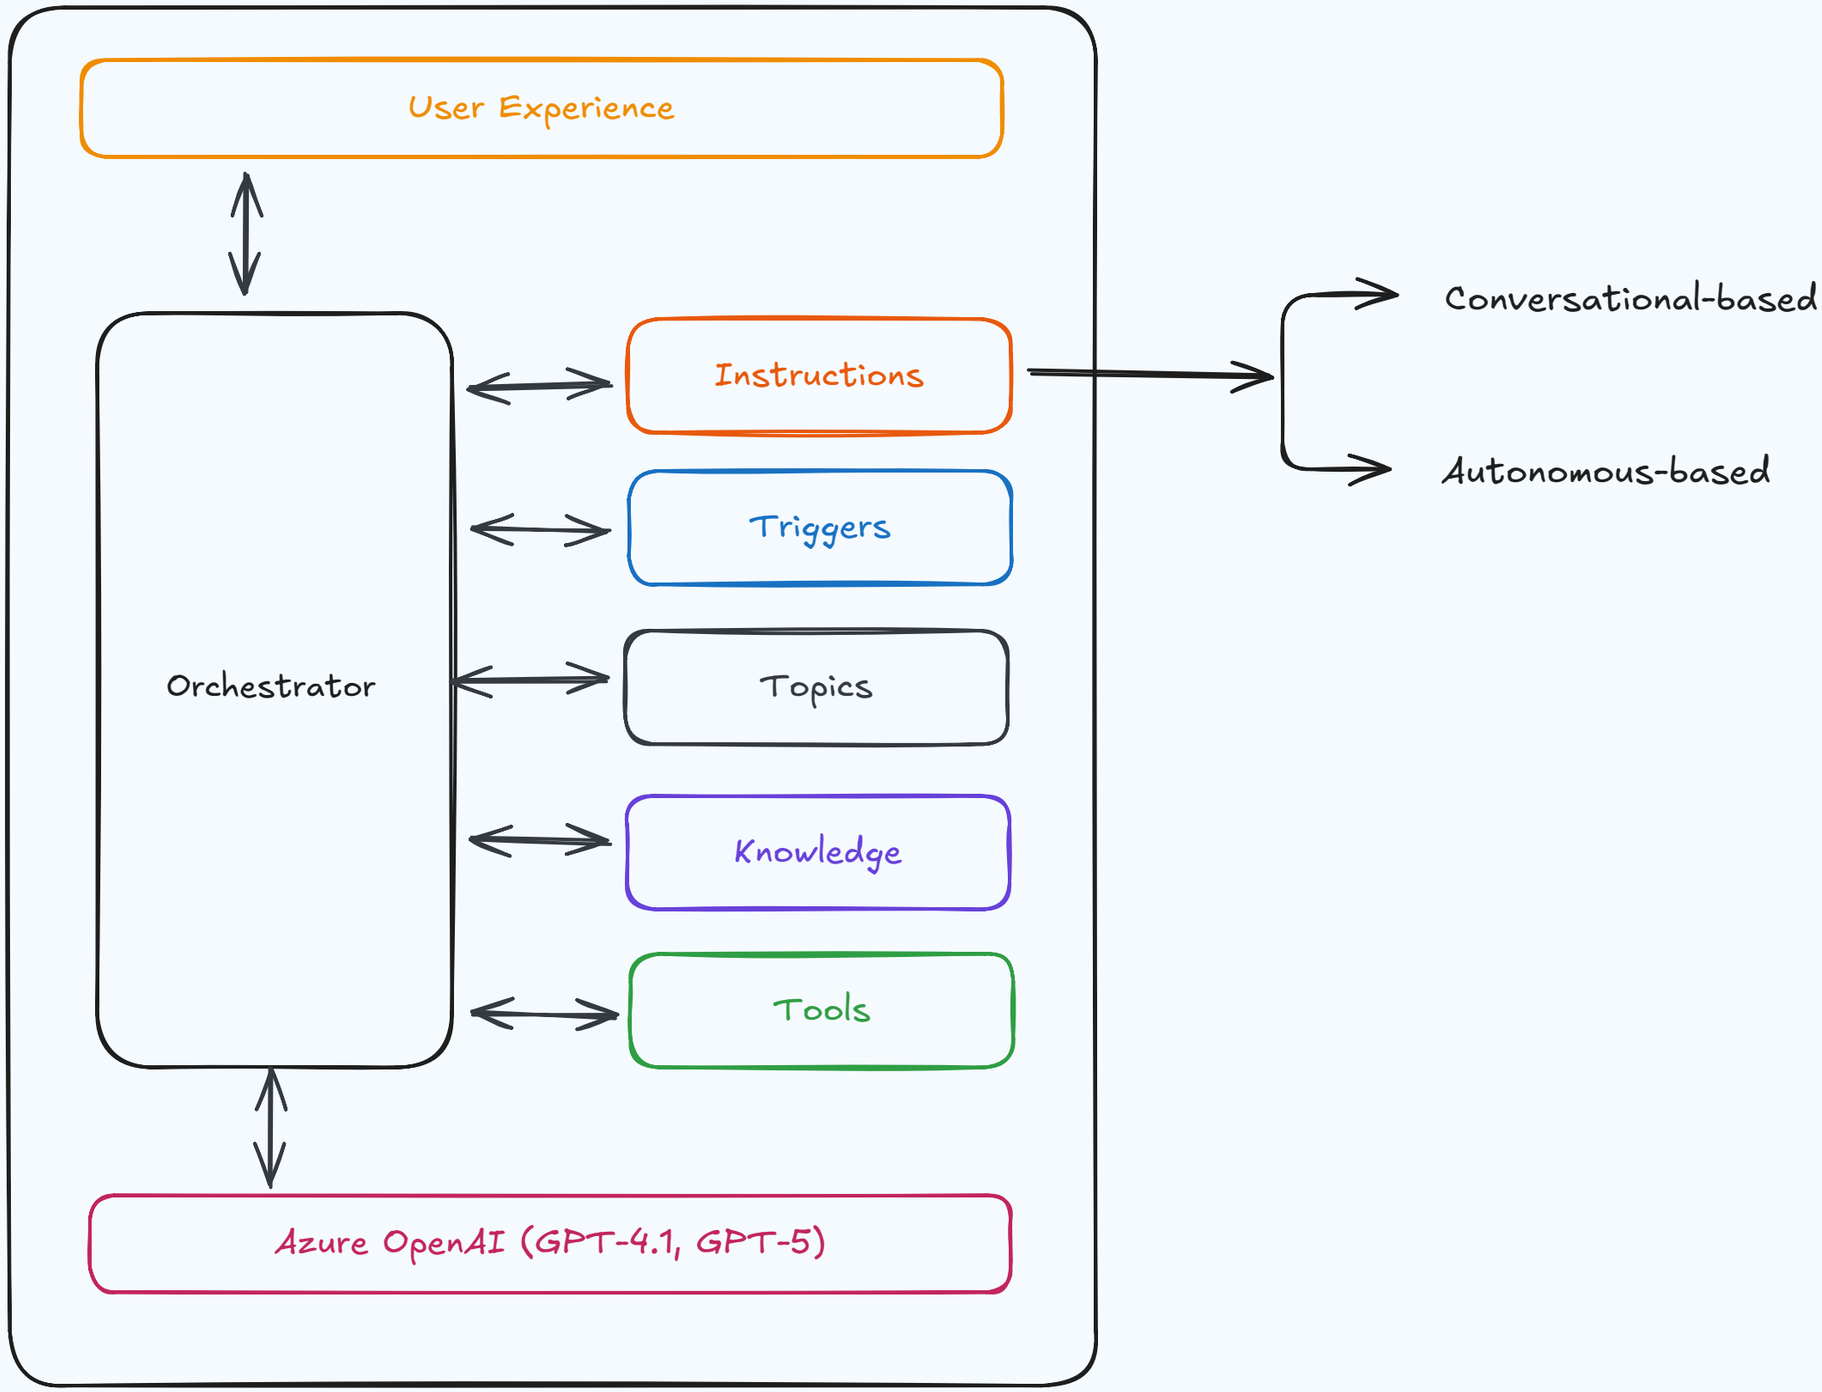
Key benefits

- Rapidly automate new scenarios without rebuilding flows
- Tailor responses and actions to each user and situation
- Less manual authoring, more scalable automation



2

Instructions



Instructions

Define your agent's behavior using natural language

Tell your agent what to do, how to respond, and when to act using a simple conversational experience – no coding required.

Ensure your agent follows best practices and business rules every time.

Easily add reference to specific objects such as tools, topics, triggers, knowledge sources, variables or PowerFx expressions in line.

Enable deep reasoning by specifying which tasks the agent should spend more time thinking about.

Instructions
Mode: Text
Model: GPT-4o mini
Test
Evaluate the sentiment of the given User comment , being mindful of its tone, context, and substance. The response should be courteous and show understanding, addressing all inquiries or tasks highlighted. Keep the response succinct and straightforward, steering clear of vagueness. Should the message convey a grievance or unhappiness, express acknowledgment and readiness to help. Use a fitting closure for formal exchanges, and for customer questions, clarify subsequent actions or request further details if needed. Before sending, review for grammatical precision and cultural appropriateness.
For context you can use the previous analysis on this table Feedback Account

Subject: Re: Issue with Reliance + Approval Feature
Hi Lana,
Thank you for reaching out and sharing your concerns regarding the approval feature in Reliance +. I understand how frustrating it can be when technology doesn't work as expected, especially with an upcoming demo for your project.
To assist you better, could you please provide more details about the error message you are receiving? Additionally, if you could share the specific settings you have tried adjusting, that would be helpful in diagnosing the issue.
I appreciate your patience, and I'm here to help you resolve this as quickly as possible.
Best regards,

Expenses Report Assistant Lv100

An AI assistant that analyzes uploaded receipts, validates items against company policies, and creates a complete, compliant expense report. Automatically generates a summary PDF, organizes files in SharePoint, and notifies the manager with everything needed for review.

Objectives

- Extract and validate receipt items using the correct regional policy.
- Group expenses by category and convert totals to USD.
- Generate a summary PDF and save it in a dedicated SharePoint folder.
- Share folder link and PDF summary with the manager via email.
